SUPPLEMENT TO
REPORT NO.

THIS IS UNEVALUATED INFORMATION

The following report of Soviet purchases of electrical transformers from Belgium in 1946 has been received:

2. Seven single-phase transformers with three windings of 2500 KVA each to form a three-phase group 131/38.5/6.3 KV to modify the medium single-phase tensions and to read:
- | | | |
|----------------|--------|---------------------------|
| High tension | 69950 | (instead of 70,000 Volts) |
| Medium tension | 22,240 | (instead of 22,000 Volts) |
| Low tension | 6,300 | Volts (as is) |
- The transformers were:

The transformers were designed to operate in temperatures of 30 degrees below zero in the far northern regions. Due to their size, they can be transported to the region where they are to be used during only one month of the year. Additional identical transformers have been constructed by the Ateliers de Constructions Electriques de Charleroi.

- b. Two transformers, Three-phase/10,000 KVA-121/6.3 KV.
- c. Two single-phase transformers with three windings of 5,600 KVA per winding, 110/38.5/10.5 KV.
- d. Seven single-phase transformers with three windings 7500/5000/75,000 KVA

Comment. Previously received information indicates that the Soviets have been putting power transformers on railway cars so that they may be shunted around to towns where they are needed. Photos of these transformers are available in the CIA Graphic Register.
